

60cm SmartTool

The SmartTool can measure all angles in a 360 degrees range.

The SmartTool can take abuse other levels can't because its components are made of high strength materials, and you can recalibrate it to factory accuracy with the touch of a button.

The SmartTool is simple to use. Just press the On/Off button, and SmartTool will show you the angle of any surface with a resolution of 0.1 degree. The display even flips over with the level, so SmartTool always reads "right side up".

It shuts off automatically after 5 minutes when it's not being used. It allows you to measure angles three different ways: Degrees, Percentage Slope and Inches/foot.

SmartTool is designed to be job site tough. The 60cm box frame is extruded from high strength aluminium. The two bubble vials are machined from solid acrylic blocks.

The SmartTool has a listen & level audio feature. A beeper sounds when the SmartTool is level and/or plumb.

The SmartTool is also available in a 120cm length. Both the 60cm and the 120cm SmartTool comes with a padded shoulder bag.
